GolfProgress

See your progress beyond the score

GolfProgress is a golf app for players who want to get better without turning every round into a data-entry job. Log a round in under a minute, and the app shows what went right, what to work on next, and how your practice and habits add up.

For the web, Android and iPhone. Currently in beta.

WHAT

A coach-like view of your game, not a spreadsheet

After every round, GolfProgress gives you a **fitness score** out of 100. It's built from four pillars: Execution, Damage control, Consistency and Habits. With the score come a few **micro-wins** from that round and **one thing to focus on** next time. Practice sessions and short reflections count too, because improvement comes from what you do between rounds as well.

Every number explains itself. Tap a pillar and you see what it compared your round against, and how confident the app is. With only three rounds logged, it says so: "early days".

WHY

Most golf apps measure. Few help you keep going.

The best-known golf apps are built around detailed statistics. Strokes gained, shot-by-shot tracking, club sensors, GPS distances. That works brilliantly for players who enjoy the data and record every shot. For many club golfers it has three problems:

- **Entry is the price of insight.** Strokes gained needs every shot and its distance. That means tagging shots during the round, or buying sensors. Many golfers stop after a few weeks.
- **A bad score feels like the whole story.** If the main number is strokes against par, a round 3 shots over your average is simply a bad round, even if you kept the ball in play and three-putted less.
- **Practice is invisible.** Statistics apps look at what happened on the course. The range session, the putting drill and the lesson don't show up anywhere, so the effort that drives improvement goes unrewarded.

> GolfProgress is designed for the golfer who wants to improve steadily and keep enjoying it. It asks for the minimum, finds the positives in every round, and treats practice and reflection as part of your progress.

WHAT MAKES IT DIFFERENT

Four choices that set it apart

Brief data entry AVAILABLE

Only strokes and holes are required. Choose how much you track: Minimal, Balanced or Detailed. The form shows just those fields. Logging a round takes under a minute, after the round, without touching your phone on the course.

Positive feedback AVAILABLE

Every round gets micro-wins, such as "Fewer penalties" or "Big mistakes contained". The wording is encouraging and never judgmental: "3 strokes above your baseline", not "a bad round". The app gives one clear next focus instead of a wall of numbers.

Practice counts AVAILABLE

Log range, putting, short-game, simulator and lesson sessions with a goal and notes. Practising and playing regularly, about once a week, earns points in the Habits pillar. So does reflecting on a round.

Coach access PLANNED

Invite your coach or pro to follow your rounds, practice sessions and reflections, and give feedback on them in the app. Your lesson then starts from what actually happened on the course, not from memory.

HOW

How a round becomes feedback

1. Log the round in under a minute

Pick the date, 9 or 18 holes, course and tee, and enter your strokes. Your tracking mode decides what else the form asks:

TRACKING MODE	WHAT YOU ENTER	FOR WHOM
Minimal	Strokes only	Anyone who just wants to see their trend and habits
Balanced	Adds putts and penalties	Most club golfers
Detailed	Also fairways, greens in regulation, three-putts and blow-up holes	Players who like a bit more insight

Every extra stat is optional. A stat you leave out lowers the app's confidence a little. It never counts as a perfect zero.

2. Get a fitness score with four pillars

Each pillar scores 0 to 25, compared with **your own** recent golf: the 5 rounds before this one. This is a worked example. An 18-hole round of 92 for a player who averages 89. They had 1 penalty and 2 blow-up holes, played or practised 3 times in the last four weeks, and wrote a short reflection.

PILLAR	WHAT IT REWARDS	EXAMPLE
Execution	Scoring better than your baseline. At your average you get 12, and each stroke better or worse moves it by one.	9 / 25
Damage control	Keeping penalties and blow-up holes off the card. A full 25 needs both tracked and none of either.	17 / 25
Consistency	Not letting a round fall apart, measured against your own spread. A great round never counts against you.	13 / 25
Habits	Playing or practising about once a week (up to 15) and reflecting on the round (10).	21 / 25
Fitness score		**60 / 100**

Three strokes over average would feel like a bad day in a strokes-only app. Here the player also sees good damage control and strong habits. Both are things they control, and both are improving.

3. Celebrate micro-wins, and get one next focus

The app picks up to three wins from the round, for example:

Fewer penalties | Putting held steady | Learning captured

Then it names one thing to work on, with the reason. Examples are "Reduce penalty strokes", "Cut down 3-putts" or "Improve damage control". If you track very little, the suggestion may simply be to add one stat for sharper insights.

4. Reflect in a few taps

Optionally, rate your focus and mood from 1 to 5 and note whether frustration carried over between holes. Then add what worked, what to repeat, and one change for next time. It takes thirty seconds, it counts towards Habits, and it gives you (and later your coach) the story behind the numbers.

5. See the trend and a monthly review

The Progress section charts your fitness score and strokes over time, shows monthly averages, and writes a monthly review with highlights and a focus for the month ahead.

COMING NEXT

Coach access and feedback on rounds and practice PLANNED

Coach access isn't in the beta yet. This is what it's meant to do:

- **You stay in control.** You invite a coach, and you can remove them at any time. They see only what you share.
- **Feedback where it belongs.** A coach can comment on a specific round, reflection or practice session. You see the feedback right next to it.
- **Practice with a purpose.** A coach can suggest the goal for your next sessions. Your practice log shows whether you followed it, and your rounds show whether it worked.
- **Better lessons.** The coach sees your trend, your next focus and your own words from reflections before the lesson starts.

COMPARED WITH OTHER GOLF APPS

Where GolfProgress fits

These are excellent apps with a different goal. If you want shot-level analytics or games with your friends, they do that better. GolfProgress is for steady improvement with as little effort as possible.

	GOLFPROGRESS	GOLF GAMEBOOK	SWINGU	ARCCOS
Built around	Progress, habits and positive feedback	Scorecards, games and live leaderboards with friends	GPS and strokes gained against a target handicap	Automatic shot tracking and strokes gained
Entry per round	Strokes and holes; more is optional. Under a minute, after the round	Hole-by-hole score during the round, more for statistics	Hole-by-hole score; shot details for deeper stats	Club sensors or a wearable record each shot
Main feedback	Fitness score, micro-wins, one next focus	Scores, handicap, statistics and social sharing	Strokes gained by part of the game	Strokes gained, club distances
Practice	Logged sessions count towards your score	Not the focus	Not the focus	Not the focus
Reflection	Focus, mood and lessons after each round	No	No	No
Coach	Feedback on rounds and practice (planned)	No	No	Data can be shared with Clippd, a platform that connects golfers with coaches
Extra hardware	None	None	None	Sensors or wearable, with a subscription

Based on the apps' public store listings and reviews as of October 2026. Features change, and paid tiers differ. Check each app for its current offering.

WHO IT'S FOR

Made for the golfer who wants to keep improving

- **Club golfers** who want to see whether they're getting better without tracking every shot.
- **Golfers who practise** and want that effort to count.
- **Players who get frustrated** by a single number and want a fairer, kinder picture of their game.
- **Coaches and their students** who want a shared, simple record between lessons (planned).

STATUS

Where it stands today

- **Available in the beta:** rounds with tracking modes, fitness score with explanations, micro-wins, next focus, reflections, practice sessions, progress charts, monthly reviews, English and Dutch.
- **Platforms:** the web app is live for testers. The Android app runs on testers' phones, and Google Play internal testing is being set up. The iPhone app is in development, with TestFlight to follow.
- **Planned:** coach access with feedback on rounds and practice, then the public store release, offline round entry and reminders.
